Summary

As a Frontend Developer with a strong foundation in HTML, CSS, and JavaScript, I specialize in crafting seamless, user-centric applications using Next.js and React. Currently pursuing a degree in Computer Programming at İzmir University of Economics, I combine technical expertise with a collaborative mindset to deliver impactful digital solutions. Dedicated to continuous learning, I stay updated with emerging technologies to drive innovation and efficiency in my work.

Projects

Üniversite Değerlendir ⧉
University Rate App

Designed a platform enabling users to anonymously rate and leave comments about universities in Turkey. Focused on creating an accessible and user-friendly interface for collecting and displaying ratings while ensuring user anonymity.

git.cow ⧉
Github Profile Analytics

Git Cow is a sophisticated web tool designed for developers who want a more efficient way to analyze their GitHub activity and project metrics.

Spotiwrap ⧉
Spotify Tracks App

Developed a web app using Spotify API that provides users with personalized insights into their listening habits, including top tracks, artists, and genres, along with dynamic data visualizations and shareable summaries.

Lumi UI ⧉
Component Library

A modern, customizable UI component library designed for React and Next.js projects. Provides a collection of reusable components to streamline development. Built with performance and accessibility in mind for a seamless user experience.

Lumi Kanban ⧉
Kanban Boaord

Features drag-and-drop functionality for seamless task movement. Built with a dynamic UI that adapts to different workflows. Supports real-time updates for a collaborative experience.
